

Safyr 8 New Features

January 2024
© Silwood Technology Ltd

Introduction

Safyr 8 adds HANA Calculation View to the range of metadata extracted from SAP BW HANA-based systems.

A range of other minor enhancements are included in this release.

Please see the Safyr 8 Release Notes for full details of the improvements and fixes.

BW HANA Calculation Views

Safyr can now extract metadata for the HANA Calculation Views that are the basis of other BW 'objects' in a SAP BW HANA system.

Metadata describing the Calculation Views is extracted, together with lineage information that show how the Calculation Views are consumed, both by other Calculation Views, and BW 'objects' such as ADSOs.

Upgrading to Safyr 8

Please read the *Safyr 8 Release Notes*, available on the Safyr Support area for full details of how to upgrade to this release.

Please check with our support group (support@silwoodtechnology.com) if you require more details of the upgrade process.
